

March 12, 2024

Weather

- East-central Argentina, Uruguay and Rio Grande do Sul Brazil will experience flooding rain late this week and especially next week raising the potential crop and property damage
 - Much of Mercosur rice production in these nations will be at risk of damage because of rain at harvest time
 - Other crops (including corn and soybeans) may be negatively impacted, although many will manage through the wet weather
- Most of Argentina will get plenty of rain in the next ten days with southern Buenos Aires driest
- U.S. Delta and southeastern states will see a new wave of heavy rain this weekend with another 1.50 to more than 4.00 inches occurring in mostly the same region that received heavy rain this past weekend
 - Additional rain is advertised for the second half of next week
- GFS model runs removed West Texas rainfall, but ECMWF is still promoting showers this weekend: Confidence is low that significant rain will fall
- GFS was wetter in southernmost and westernmost Canada Prairies and the far northern U.S. Plains next week, though confidence is low; the 06z model run reduced some of the potential precipitation
- Central North America cooling is still advertised for next week and especially in the following weekend with Canada and the northern U.S. Plains most anomalously cold in the last week of March
- Indonesia's recent bout of heavier rainfall is abating from west to east
- West-central Africa will see a favorable mix of rain and sunshine over the next couple of weeks supporting coffee, cocoa, rice and sugarcane development
- Far eastern Mexico will turn wetter briefly next week while all other areas continue dry
- Colombia, Panama and southern Costa Rica will slowly trend wetter this next weekend
- Venezuela and northern Colombia dryness will continue for a while longer
- South Africa rainfall will continue restricted in the coming week to ten days, although days 11-15 are wetter

News:

- Dr. Cordonnier left his Brazilian soybean and corn production estimates at 145 MMT and 112 MMT, respectively, with a neutral to lower bias toward both crops. Cordonnier left his Argentine crop estimates at 50 MMT for soybeans and 54 MMT for corn, with a neutral bias toward both.
- Ukraine grain trade union on Tuesday projected the country's grain and oilseed harvest in 2024 could shrink to around 76.0 mln mt down from last year's 82.6 mln mt. This year's production figure includes 26.3 mln mt of corn, 20.0 mln mt of wheat and 13.7 mln mt of sunflowers. The lower expected harvest is attributed to lower acres, the lower acres are in turn due to higher export costs and poor global prices.
- Chinese customs announced they have banned import of Albanian pigs, boars, and related pork products due to African Swine Fever outbreak.
- Tyson Foods will permanently close a pork plant in Perry, Iowa, on June 28, citing a need to optimize operational efficiency to better serve customers as the reason for the closure. The plant slaughters about 9,000 hogs per day, a little less than 2% of U.S. production.
- The Biden administration will now require meat, poultry, and eggs labeled as U.S. products to be required to come from animals born, raised, slaughtered and processed here in the US. Analysts say the move is a win for US ranchers. Ranchers in the past say they've been harmed by companies that labeled animals raised in foreign countries then final processed in the US as a "Product of the USA".
- India's state-run Food Corporation estimated government held Wheat stockpiles have dropped to 9.7 mln mt, down from the 11.7 mln mt in March 2023. The March 2024 figure is the lowest level stocks have been since 2017. Two poor consecutive crops have prompted the government to sell record volumes of wheat in a bid to boost supplies and temper price rises.

Technically Speaking:

Price action got better yesterday and overnight with more technical indicators turning more positive.

Market Fundamentals:

Yesterday's Trades: No new trades.

ADVICE: No new advice---a trading affair at best in grains with traders reluctant to press short side too far with upside thought to be limited as well. Meats slanted negatively---hogs concerning. See news section.

COMMENTS:

- Brazilians cut production for corn and beans, 3mmt for beans and .9 MMT for corn to fresh production lows. They offset Brazil exports and crush demand, raising stocks to use in soybeans. Corn stocks fell slightly with the .9 MMT production cut.
- Brazil bean export prices have narrowed substantially in recent weeks vs the USA, but the spread remains wide.
 - o Interior basis in US widens as futures rise.
- Weather increasingly focusing on a little drier for Brazil increasing need for a good April moisture wise, but short term some moisture helping. Interesting the Rice regions of Brazil getting a lot of rains that may affect quality of rice.
- Argentina looks good to ok short term
- US has a LOT of warnings of increased fires due to wind and warm weather in 70's.
- Profit squeeze starting to increase bank concerns--- 20,000 acre N IL farmer got plugged pulled
- 430 acre farm auction 3 miles from me in N IL today so we'll see how deep pockets are.
- Media analysts weary and advising selling –kinda like deer in the headlites not knowing what is happening other than short covering as an excuse

RESULTS HAVE MANY INHERENT LIMITATIONS, SOME OF WHICH ARE DESCRIBED BELOW. NO REPRESENTATION IS BEING MADE THAT ANY ACCOUNT WILL OR IS LIKELY TO ACHIEVE PROFITS OR LOSSES SIMILAR TO THOSE SHOWN. IN FACT, THERE ARE FREQUENTLY SHARP DIFFERENCES BETWEEN HYPOTHETICAL PERFORMANCE RESULTS AND THE ACTUAL RESULTS SUBSEQUENTLY ACHIEVED BY ANY PARTICULAR TRADING PROGRAM.

ONE OF THE LIMITATIONS OF HYPOTHETICAL PERFORMANCE RESULTS IS THAT THEY ARE GENERALLY PREPARED WITH THE BENEFIT OF HINDSIGHT. IN ADDITION, PROGRAM IN SPITE OF TRADING LOSSES ARE MATERIAL POINTS WHICH CAN ALSO ADVERSELY AFFECT ACTUAL TRADING RESULTS. THERE ARE NUMEROUS OTHER FACTORS RELATED TO THES IN GENERAL OR TO THE IMPLEMENTATION OF ANY SPECIFIC TRADING PROGRAM WHICH CANNOT BE FULLY ACCOUNTED FOR IN THE PREPARATION OF HYPOTHETICAL PERFORMANCE RESULTS AND ALL OF WHICH CAN ADVERSELY AFFECT ACTUAL TRADING RESULTS.

THE GULKE GROUP HAS HAD LITTLE OR N\O EXPERIENCE IN TRADING ACTUAL ACCOUNTS FOR ITSELF OR FOR CUSTOMERS. BECAUSE THERE ARE NO ACTUAL TRADING RESULTS TO COMPARE TO THE HYPOTHETICAL PERFORMANCE RESULTS, CUSTOMERS SHOULD BE PARTICULARLY WARY OF PLACING UNDUE RELIANCE ON THESE HYPOTHETICAL PERFORMANCE RESULTS. This composite performance records are hypothetical and are used as a guide for position tracking purposes. Execution prices are an average execution price of the first ten trades recorded after advice has been posted and commonsense. In the event less than 10 trades are executed, prices will be determined by looking at fills, in relation to when the advice was given to clients, and a commonsense price will be determined. If no trades are executed, prices are determined by looking at a 1 min chart to determine the tracking price. The closing price on the previous day is used to determine the P/L listed in the Morning Comments and are net of average round turn commissions of \$33.00 for futures and \$36 for options and round turn fees of \$5.34 for grains and \$5.50 for livestock (these fees may change at any time by the CME). One of the limitations of a hypothetical composite performance records is that client decisions relating to the recipient's advice may or may not elect to act upon such advice and timing of execution by clients of advice may create a difference in the execution price represented in the matrix below. Therefore, composite performance records may differ which may materially affect trading results.
