### May 13, 2024

### Weather:

West Texas turned out lighter than expected during the weekend, although another chance for rain is coming for mid- to late this week

- U.S. hard red winter wheat areas also received some welcome showers and thunderstorms during the weekend, although western Kansas, eastern Colorado and the Texas Panhandle still have need for more rain
  - o Some follow up rain is expected during the second half of this week
- Central and lower U.S. Midwest is advertised much wetter in the next ten days (perhaps too wet)
  - Some of the advertised rain may be overdone for this weekend and next week and future model runs may reduce some of the rain; planting delays are likely
- Excessive rain and flooding returned to central through northeastern Rio Grande do Sul, Brazil during the weekend
  - Drier weather is expected this week, but next week may trend wetter once again
- Mato Grosso do Sul will get some rain this weekend into early next week favoring some Safrinha crops
- Cold temperatures in Argentina this morning brought more frost and freezes to central and southern parts of nation
- CIS temperatures turned warmer during the weekend, but will stay cooler than usual
- Rain the North China Plain will remain restricted for a while, despite some showers
- Southern India may turn much wetter late this week and especially this weekend into next week
- Philippines rainfall will remain restricted, despite some increase in shower activity
- Southeastern Ukraine, Krasnodar and the Northeast Caucasus region of Russia will get rain this week favoring some relief for a part of the dry region
- Excessive rain and flooding are projected from eastern Texas through the lower Delta to Georgia from two waves of heavy rain this week and during the weekend into Monday, May 20

- Greater pre-monsoonal showers and thunderstorms are advertised for eastern and southern Mexico in the next two weeks
- Western Europe will turn wetter with excessive rain in northern Italy, eastern France, Belgium and some western Germany locations later this week into early next week

### News:

- Nonghyup Feed reportedly paid \$245.40/mt cf for 68,000 mt of feed grade Corn in a privately negotiated deal late Friday.
- World Weather Inc. speculates permanent wheat damage from recent freezes is not likely to be more than 6%; winter rapeseed likely suffered damage on 40% of crop area. However, a much larger part of Russia's Southern Region, eastern Ukraine and western Kazakhstan is dealing with drought. Lost wheat production because of drought could be many times greater than that which is lost from recent freezes.
- Russia's IKAR agricultural consultancy cut its forecast for Russia's wheat crop to 86 MMT from 91 MMT previously. Its 2024-25 wheat export forecast was lowered 3.5 MMT to 47 MMT. IKAR forecasts total grain production at 135 MMT and exports at 59.5 MMT, down 5 MMT, respectively. Russia's ag ministry kept its grain production forecast at 132 MMT.
- Ukraine Ag Ministry data egged 23/24 grain exports so far at 43.2 mln mt, that includes 24.0 mln mt of Corn, 16.4 mln mt of wheat, and 2.24 mln mt of barley. In the year earlier period Ukraine exported 43.6 mln mt of grain. So far in May around 1.85 mln mt of grains have been exported.
- Chinese companies won five more bids to explore Iraqi oil and gas fields, Iraq's oil minister said on Sunday, as the Middle Eastern country's hydrocarbon exploration licensing round continued into its second day. Chinese companies have been the only foreign players to win bids so far.

## **Technically Speaking:**

# World Wheat Supply and Use

The world numbers may help to paint a little short-term window. In corn the USDA did finally bring down some of the production numbers in corn for South America. World ending stocks are a lot more friendly for 23/24 than they were before the report came out, at least in the eyes of the USDA and the market has taken notice. They also made their early predictions for 24/25 and the ending stocks are only slightly lower, but I never like to see a Forecast that show a deficit in trade. They likely had to do that because of their lowing of production.

The soybean world picture is not exactly uplifting moving forward and shows some potential headwinds down the road. The marketplace will look for more reductions in the 23/24 soybean crop in South America, but does that really matter once harvest is over down there and the world has not run out of soybeans?

Wheat is on a tear likely due to productions concerns in Russia. World ending stocks for 24/25 are lower than this year but again these are all forecasts, and we are dealing with countries that tend not to tell the truth about production, etc.

## Yesterday's Trades:

**ADVICE:** No New Advice.

### **COMMENTS:**

At this point we want to watch these markets and see how things play out. Short covering appears to be happening along with or because of friendly data put out by the USDA. Weather here in the US should have prevented last week's planting process from increasing much with more rain likely to happen this week in areas. **The funds bought over 100k contracts of corn and soybeans which is the biggest short covering in one week since 2019. That also does not include any short covering happened on Friday.**

RESULTS HAVE MANY INHERENT LIMITATIONS, SOME OF WHICH RE DESCRIBED BELOW. NO REPRESENTATION IS BEING MADE THAT ANY ACCOUNT WILL OR IS LIKELY TO ACHIEVE PROFITS OR LOSSES SIMILAR TO THOSE SHOWN. IN FACT, THERE ARE FRE-OUENTLY SHARP DIFFERENCES BETWEEN HYPOTHETICAL PERFORMANCE RESULTS AND THE ACTUAL RESULTS SUBSEQUENTLY ACHIEVED BY ANY PARTICULAR TRADING PROGRAM. ONE OF THE LIMITATIONS OF HYPOTHETICAL PERFORMANCE RESULTS IS THAT THEY ARE GENERALLY PREPARED WITH THE BENEFIT OF HINDSIGHT. IN ADDITION, PROGRAM IN SPITE OF TRADING LOSSES ARE MATERIAL POINTS WHICH CAN ALSO ADVERSELY AFFECT ACTUAL TRADING RESULTS. THERE ARE NUMEROUS OTHER FACTORS RELATED TO THES IN GENERAL OR TO THE IMPLEMENTATION OF ANY SPECIFIC TRADING PROGRAM WHICH CANNOT BE FULLY AC-COUNTED FOR IN THE PREPARATION OF HYPOTHETICAL PERFORMANCE RESULTS AND ALL OF WHICH CAN ADVERSELY AFFECT ACTUAL TRADING RESULTS. THE GULKE GROUP HAS HAD LITTLE OR N\O EXPERIENCE IN TRADING ACTUAL ACCOUNTS FOR ITSELF OR FOR CUSTOMERS. BECAUSE THERE ARE NO ACTUAL TRADING RESULTS TO COMPARE TO THE HYPOTHETICAL PERFORMANCE RESULTS, CUSTOMERS SHOULD BE PARTICULARLY WARY OF PLACING UNDUE RELIANCE ON THESE HYPOTHETICAL PERFORMANCE RESULTS. This composite performance records are hypothetical and are used as a guide for position tracking purposes. Execution prices are an average execution price of the first ten trades recorded after advice has been posted and commonsense. In the event less than 10 trades are executed, prices will be determined by looking at fills, in relation to when the advice was given to clients, and a commonsense price will be determined. If no trades are executed, prices are determined by looking at a 1 min chart to determine the tracking price. The closing price on the previous day is used to determine the P/L listed in the Morning Comments and are net of average round turn commissions of \$33.00 for futures and \$36 for options and round turn fees of \$5.34 for grains and \$5.50 for livestock (these fees may change at any time by the CME). One of the limitations of a hypothetical composite performance records is that client decisions relating to the recipient's advice may or may not elect to act upon such advice and timing of execution by clients of advice may create a difference in the execution price represented in the matrix below. Therefore, composite performance records may differ which may materially affect trading results.
